

# Bucket & Grapple Solutions

The leading supplier of material handling equipment for over 50 years.

# BUILT ON A REPUTATION OF EXCELLENCE

---

Atlas-SSI product excellence is the competitive edge you need – both now and in the future. Our high-performance buckets and grapples are built for the toughest jobs, setting the standards for quality engineering and craftsmanship.

As a full-service manufacturer, Atlas-SSI offers comprehensive engineering, manufacturing and servicing capabilities for new and rebuilt equipment. Add this to our outstanding customer support and you have a winning combination.

Our core values are simple – we emphasize safety and superior customer service. By choosing to partner with Atlas-SSI, you are engaging with a company who understands the importance of equipment quality and has the capabilities to rapidly respond to virtually any bucket or grapple challenge that may arise at your site, no matter the manufacturer or type of equipment.

---

## NEW EQUIPMENT

Atlas-SSI manufactures single, two, three and four rope cable-operated buckets and grapples as well as radio remote control, hydraulic and continuous unloader buckets used for all types of materials and applications. Using the latest manufacturing methods and highest quality materials, our buckets and grapples carry with them the quality and reliability that customers have come to know and expect from Atlas-SSI.

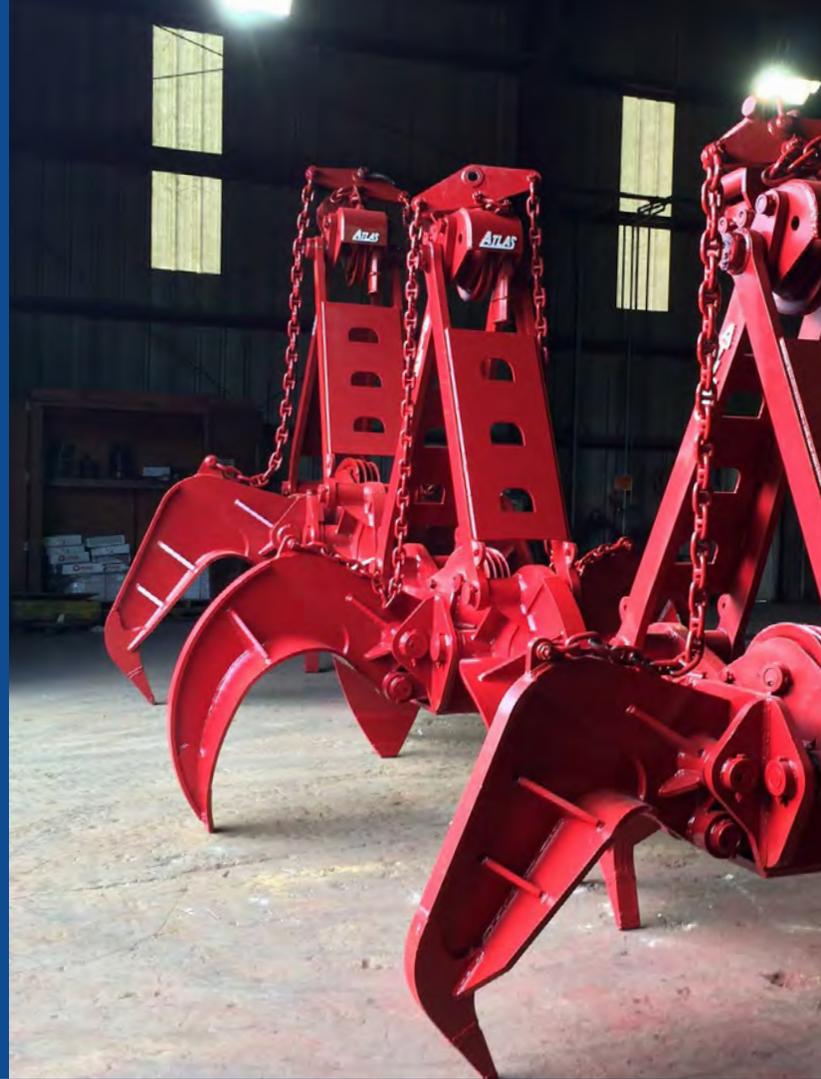

## RENTALS

Atlas-SSI maintains an inventory of buckets and grapples that are available for short- or long-term rental. Whether it's for project cost control or an unplanned equipment breakdown, our rental fleet is well maintained and is ready to ship from our strategically located facility near the Mississippi River. To avoid downtime, many customers leverage our rental program while their bucket or grapple is being rebuilt at our facility.

## REBUILDS

In addition to manufacturing new equipment, Atlas-SSI has also made its mark on the industry with top-quality rebuilds. Atlas-SSI has the expertise to rebuild all styles, makes and models of buckets and grapples from any manufacturer. The quality of the rebuilds often exceed their original manufacturers' performance specifications. This not only makes the equipment work like new, but saves you time and money, improving your bottom line.

## PARTS & SERVICE

With extensive engineering and manufacturing experience, Atlas-SSI has the specialized knowledge to service all makes and models of buckets and grapples and make best practice recommendations on equipment maintenance and operation to help maximize the life of your bucket or grapple. Because we manufacture the equipment, we also have an inventory of parts that can be quickly shipped to your jobsite.

## BUILT ON AMERICAN EXPERIENCE AND REPUTATION

Our state-of-the-art manufacturing sites feature over 250,000 square feet of combined space and produce a wide range of buckets and grapples. Atlas-SSI engineers use the latest CAD software programs in combination with high-tech equipment and experienced welders and machinists to ensure that each bucket and grapple is produced to the highest standards.

Our buckets and grapples are manufactured using a combination of A-514 (T-1) and AR-400 steel, heated treated pins, rollers and bushings to maximize structural strength and durability in the field. This helps to ensure long and trouble-free operation on the jobsite.

The quality of our buckets and grapples is a top priority and we conduct detailed inspections in every step of the manufacturing process. When our engineers provide the final sign-off for equipment to leave our facility, you can rest assured that Atlas-SSI buckets and grapples will exceed your expectations.

## SAFETY DEFINES OUR CULTURE

We are proud to be a trusted extension of our clients' in-house engineering and maintenance teams. As the most experienced water intake system provider in North America, we operate with an uncompromising commitment to health and safety at our facilities and on the jobsite. Safety starts with our leadership team and touches every employee through daily hazard assessments, safety training and ensuring that all essential industry safety certifications are in place.
